Nexora Technologies

Company Information Handbook

Nexora Technologies is a software and cloud engineering company that builds digital platforms, data products, and AI-powered enterprise solutions. The company serves customers in financial services, retail, logistics, education, and technology.

Headquarters	Bengaluru, India
Founded	2019
Employees	Approximately 420
Primary business	Cloud platforms, data engineering, AI systems, and enterprise software

1. Company Mission and Values

Nexora Technologies' mission is to help organizations build reliable, secure, and useful digital products. The company emphasizes customer impact, engineering quality, responsible AI, continuous learning, clear communication, and operational ownership.

2. Departments

Department	Primary Responsibility
Engineering	Backend, frontend, platform engineering, reliability, and internal tools
AI & Data	Machine learning, LLM applications, analytics, data platforms, and evaluation
Product	Product strategy, research, requirements, and roadmap planning
Sales	Enterprise sales, partnerships, account growth, and customer relationships
Customer Success	Onboarding, support, adoption, and customer training
Finance & Operations	Budgeting, procurement, payroll, legal operations, and administration

3. Employee Leave Policy

Full-time employees receive 25 paid leave days per calendar year. Employees joining after July 1 receive a prorated allocation. Up to 5 unused leave days may be carried into the following year.

Employees also receive 10 paid sick days each year. Planned leave should normally be submitted through the HR portal at least 7 calendar days in advance and approved by the employee's direct manager.

4. Learning and Development

Engineering employees receive an annual learning budget of $1,500. AI and Data employees receive $2,000, while Sales employees receive $700. Approved expenses include courses, books, technical certifications, and professional conferences.

5. Remote Work Policy

Employees may work remotely up to three days per week. Teams may designate common office days for collaboration. Fully remote arrangements require approval from both the department head and Human Resources.

6. Home Internet and Equipment Benefits

All employees may expense up to $50 per month for work-related home internet. New full-time employees may request a one-time home-office equipment allowance of up to $600.

7. Engineering Reliability Standards

Nexora Technologies aims to keep P95 API latency below 250 milliseconds during normal operating conditions. The monthly availability objective for customer-facing APIs is 99.95%.

Production incidents are classified as SEV-1, SEV-2, or SEV-3. SEV-1 incidents require immediate notification of the on-call engineer and incident commander. The initial acknowledgement target is 5 minutes.

Error code ERR_CONN_8421 indicates that the primary database connection pool is exhausted.

8. Cloud Cost Summary

Team	Q2 Cloud Cost
Platform	$120,000
Data	$82,000
AI	$145,000
Security	$64,000

The AI team recorded the highest Q2 cloud cost at $145,000, followed by the Platform team at $120,000.

9. Enterprise Customer Refund Policy

Enterprise subscription customers may request a refund for an accidental duplicate charge within 30 calendar days of the invoice date. Approved refunds are normally returned to the original payment method within 5 to 7 business days. Usage-based infrastructure charges already consumed are non-refundable except where required by law or explicitly approved by Finance.

10. Recent Checkout Platform Update

During the week of August 17, 2026, the Checkout team deployed payment-service release 4.8. The release added a new fraud-scoring call and changed the default database connection-pool configuration. Monitoring showed higher checkout latency after deployment. The team rolled back the connection-pool configuration on August 20, 2026. The incident review identified connection-pool contention as the primary cause of the slowdown.

11. Information Security

Employees must use company-approved devices for access to internal systems. Disk encryption is required, multi-factor authentication must be enabled, and restricted internal systems must be accessed through the corporate VPN. Executive compensation data is confidential. Engineering runbooks are restricted to authorized Engineering personnel.

12. Support and Escalation

Customer support tickets are categorized as Critical, High, Normal, or Low priority. Critical production-impacting issues should be acknowledged within 15 minutes. Normal support requests should receive an initial response within one business day.

PART B: IT Support Knowledge Base

The sections below cover everyday employee IT support: access, accounts, devices, and outages. They are the primary source for the IT Support assistant.

13. IT Service Desk and Contact Channels

Channel	Details
Self-service portal	IT Service Desk portal (preferred way to raise any request or incident)
Email	itsupport@nexora.example
Chat	#it-help channel for quick questions; #it-status for live outage updates
Phone (urgent only)	Internal extension 1000 for Critical issues, available 24x7
Service hours	Monday to Friday, 08:00 to 20:00 IST. Critical issues are covered 24x7.

14. Connecting to the Company VPN

The corporate VPN is required to reach restricted internal systems such as internal admin tools, staging environments, and engineering runbooks. It is only available on company-approved devices.

1. Open the Nexora Secure VPN client (pre-installed on managed laptops; otherwise install it from the Company Portal).
2. Select the nearest gateway, for example India-South.
3. Click Connect and sign in with your company single sign-on (SSO) account.
4. Approve the multi-factor authentication (MFA) prompt on your phone.
5. Wait for the status to show Connected, then open the internal system you need.

Problem	What to try
Authentication failed	Check that your password has not expired and your device clock is correct. Retry MFA. If it still fails, reset your password (Section 15).
Stuck on Connecting	Disconnect, switch to another gateway, and retry. Disable any third-party VPN or proxy.
Connected but cannot reach a system	Confirm you have access to that system. Restricted systems need approval from the system owner via the Service Desk.

Problem	What to try
Slow connection	Switch to a closer gateway, move to a stronger network, and close bandwidth-heavy apps.
Still not working	Raise a High priority ticket and attach a screenshot of the error and your device name.

15. Password and MFA Policy

- Passwords must be at least 14 characters and must not reuse your last 10 passwords.
- Accounts are locked after 5 failed sign-in attempts and unlock automatically after 15 minutes, or sooner through the Service Desk.
- **Password reset:** use the self-service password reset page from the sign-in screen. You verify with your registered MFA method and then choose a new password.
- If you cannot use self-service (for example, you lost your MFA device), contact the Service Desk. Identity verification and manager approval are required before an MFA reset.
- Never share passwords or MFA codes with anyone, including IT staff. The Service Desk will never ask for your password.
- Use the company-approved password manager for work credentials.

16. Devices and Software Requests

- Company laptops are normally refreshed every 36 months. Raise a request through the Service Desk portal for hardware faults or upgrades.
- Standard software is installed from the Company Portal without approval.
- Software outside the approved catalog needs direct manager approval and a security review. Standard requests are fulfilled within 3 business days.
- Personal devices must not be used to access restricted internal systems (see Section 11).
- Do not install unapproved software, browser extensions, or AI tools that upload company data.

17. Lost or Stolen Devices

If a company laptop or phone is lost or stolen, report it to the Service Desk and security@nexora.example **within 1 hour**. IT will remotely lock and wipe the device and revoke active sessions. Disk encryption (Section 11) protects data on the device until it is wiped. If the loss happens outside working hours, use the 24x7 urgent phone line.

18. Email Security and Phishing

- Report suspicious emails with the Report Phishing button in the email client, or forward them to security@nexora.example.
- Do not click links or open attachments from unexpected senders. Verify unusual payment or credential requests through a second channel.
- If you entered your password on a suspicious page, reset your password immediately (Section 15) and raise a Critical ticket.

19. Collaboration Tools and Outage Guidance

Nexora uses Microsoft Teams, Outlook, and related Microsoft 365 services for communication. When these tools are slow or unavailable:

1. Check whether others are affected and look at #it-status or the Service Desk portal banner for a known incident.
2. Check the official Microsoft 365 Service Health status for current vendor-side outage information.
3. Use workarounds: Teams in the web browser, the Teams mobile app, a phone dial-in for meetings, or email for urgent messages.
4. If the issue is only on your device, restart the app, sign out and back in, and clear the app cache.
5. Raise a ticket only if the issue persists and no known incident exists. Do not raise duplicate tickets for a known outage.

20. IT Ticket Priority and Response Targets

IT tickets use the same Critical, High, Normal, and Low priority scale as Section 12.

Priority	Typical example	First response	Resolution target
Critical	Production-impacting outage, security incident, company-wide access failure	15 minutes	4 hours
High	A team or key tool is unavailable, VPN not working for a user	1 hour	1 business day
Normal	Single-user issue, software or access request	1 business day	3 business days
Low	Questions, cosmetic issues, non-urgent improvements	2 business days	5 business days

21. Common Error Codes and Troubleshooting

Error / Symptom	Meaning	Recommended action
ERR_CONN_8421	The primary database connection pool is exhausted.	Treat as a production issue. Notify the on-call engineer. Check for recent releases or configuration changes (see Section 10) and raise a ticket at High or Critical priority.
Account locked	Too many failed sign-in attempts.	Wait 15 minutes or contact the Service Desk.
MFA prompt not received	Phone offline or notifications blocked.	Check connectivity and app notifications, or use a backup MFA method. Contact the Service Desk if unavailable.
VPN authentication failed	Expired password, MFA failure, or clock mismatch.	See Section 14 troubleshooting.

22. Frequently Asked IT Questions

How do I connect to the company VPN?

Open the Nexora Secure VPN client, choose a gateway, sign in with SSO, and approve the MFA prompt. See Section 14.

What is the password reset policy?

Passwords need at least 14 characters, cannot reuse the last 10, and are reset through the self-service page after MFA verification. Accounts lock after 5 failed attempts. See Section 15.

Who can I contact for IT help?

Use the IT Service Desk portal, email itsupport@nexora.example, or call extension 1000 for Critical issues. See Section 13.

What should I do if Microsoft Teams is down?

Check #it-status and the Microsoft 365 Service Health status, use Teams on the web or phone dial-in as a workaround, and avoid duplicate tickets. See Section 19.

I lost my laptop. What now?

Report it to the Service Desk and security@nexora.example within 1 hour so it can be locked and wiped. See Section 17.

What does ERR_CONN_8421 mean?

The primary database connection pool is exhausted. Notify the on-call engineer and raise a ticket. See Sections 7, 10, and 21.

How quickly will my IT ticket be answered?

Critical: 15 minutes. High: 1 hour. Normal: 1 business day. Low: 2 business days. See Section 20.
